Geothermal Resources of Idaho

Geothermal Investigations in Idaho, Part 9, Potential for Direct Heat Application of Geothermal Resources: Idaho Department of Water Resources Water Information Bulletin No. 30, Plate 1

1980

Scale 1:500,000
1 centimeter equals 5 kilometers
1 inch equals approximately 8 miles

Contour Interval 500 feet
Datum is mean sea level

1927 North American datum
Lambert conformal conic projection based on standard parallels 33° and 45°

Map prepared for
Idaho Department of Water Resources
by
National Geophysical and Solar-Terrestrial Data Center
National Oceanic and Atmospheric Administration
and
Division of Geothermal Energy
United States Department of Energy

For full references, credits, and explanations of data sets, see Mitchell, J.C., Johnson, L.L., and Anderson, J.E., 1980, Geothermal investigations in Idaho, Part 9, Potential for direct heat application of geothermal resources: Idaho Department of Water Resources Water Information Bulletin No. 30

Map available free of charge from Idaho Department of Water Resources, 450 State Street, Boise, ID 83702

Map produced by Ronald H. Smith, George W. Berry, and Paul J. Grim, NGSDC/NOAA, Boulder, Colorado, in cooperation with Earth Science Laboratory/University of Utah Research Institute, Salt Lake City, Utah

Digital thermal well and spring data available from GEOTHERM Project, United States Geological Survey, 345 Middlefield Road, MS84, Menlo Park, California 94025

Base map data supplied by United States Geological Survey

KEY FOR THERMAL SPRINGS AND WELLS

Number in County / Township / Range / Section / Location in Section / Spring (S) or Well (Blank) / Temperature °C / Name

1 01N 01E 01ADC 26 LILLIE COLLIAS WELL
2 01N 15E 14ADA S 52 ELK CREEK H S

Asterisk (*) in the spring/well column indicates flowing well-head temperature for DOE experimental well at Raft River KGRA in Cassia County.

Well- and Spring-Numbering System

The numbering system used by the Idaho Department of Water Resources and the U.S. Geological Survey in Idaho indicates the location of wells or springs within the official rectangular subdivision of the public lands, with reference to the Boise base line and meridian. The first two segments of the number designate the township and range. The third segment gives the section number, followed by three letters and a numeral, which indicate the quarter section, the 40-acre tract, the 10-acre tract, and the serial number of the well within the tract, respectively. Quarter sections are lettered a, b, c, and d in counterclockwise order from the northeast quarter of each section. Within the quarter sections, 40-acre and 10-acre tracts are lettered in the same manner. Well 1S-17E-23aab1 is in the NW¼NE¼ NE¼ Section 23, T. 1 S., R. 17 E., and was the first well inventoried in that tract. Springs are designated by the letter "S" following the last numeral; for example, 1S-13E-34bcbS.

Diagram showing the well- and spring-numbering system for Idaho. (Using well 1S-17E-23aab1)

Legend

Low-Temperature Geothermal Waters

Area of significant lateral extent favorable for discovery and development of local sources of low-temperature (<90°C) water. Areas are defined on the basis of thermal springs, wells, and geohydrologic settings generally favorable for recovery of thermal water. *Existing knowledge does not in general permit the inference that thermal water may be found everywhere within the depicted areas, nor do the boundaries represent certain knowledge of the areal extent of the geothermal systems.*

Areas are modified from those defined by E.A. Sammel, Duncan Foley, and John C. Mitchell in U.S. Geological Survey Circular 790. See Sammel, E.A., Occurrence of low-temperature geothermal waters in the United States, *in* Muffler, L.J.P., ed., 1979, Assessment of geothermal resources of the United States — 1978: U.S. Geological Survey Circular 790.

Thermal Springs and Wells

Thermal springs, generally ≥20°C
- Surface temperature ≤50°C
- Surface temperature >50°C

Thermal wells, generally ≥20°C
- Surface temperature ≤50°C
- Surface temperature >50°C

Regional Heat Flow

See Brott, C.A., Blackwell, D.D., and Mitchell, J.C., 1976, Geothermal investigations in Idaho, Part 8, Heat flow study of the Snake River Plain region, Idaho: Idaho Department of Water Resources Water Information Bulletin 30, and Sass, J.H., and Lachenbruch, A.H., Heat flow and conduction-dominated thermal regimes, *in* U.S. Geological Survey Circular 790.

81▲ Published regional heat flow datum in milliwatts/m²

- Known Geothermal Resources Area (KGRA) - U.S. Geological Survey designation
